

EE 422C Project 5 (Critters part 2) Team Plan

Akaash Chikarmane (avc536)

Nicholas Sutanto (nds729)

Spring 2017

Git URL: https://github.com/AkaashChikarmane/ee422c_project5.git

Both of us modified our own Critter subclasses to implement the abstract function from Critter (viewShape) and both of us chose which of the color functions to override (viewOutlineColor, viewFillColor, viewColor). We split up the changes to the model component (writing the look function and changing runStats to output a String). We met for a total of 15 hours for coding and debugging. Akaash wrote the initial controller component, Nicholas wrote the initial view component, and both of us helped with debugging all components. We used a GitHub repository to share java files and debug code. The final testing was done together.
